

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): 07/13/2015

B. DISTRICT OFFICE: San Francisco District **FILE NUMBER:** 2007-400829N

File Name: 450 Green Island Road

Waterbody Name:

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: California County/parish/borough: Napa Co. City: American Canyon

Center coordinates of site: (lat/long (in degree decimal format): Lat: 38.196 N Long: 122.264 W

Pick List (lat/long (in degree decimal format): Lat: Pick Long: Pick

Pick List (lat/long (in degree decimal format): Lat: Pick Long: Pick

Universal Transverse Mercator:

Name of nearest waterbody: unnamed tributary of San Pablo Bay

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: San Pablo Bay

Name of watershed or Hydrologic Unit Code (HUC): San Pablo Bay

Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request

Check if other sites (e.g., offsite mitigation sites, disposal sites, etc) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

Office (Desk) Determination. Date:

Field Determination. Date(s): 07/08/2015

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required].

Waters subject to the ebb and flow of the tide.

Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. *Explain:*

B. CWA SECTION 404 DETERMINATION OF JURISDICTION

There are and are not "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

1. Waters of the U.S:

a. Indicate presence of waters of U.S. in review area (check all that apply):¹

- TNWs, including territorial seas
- Wetlands adjacent to TNWs
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area

Non-wetland waters: 38.5 linear feet: width (ft) and/or 0.00088 acres. (other comments:)

Wetlands: 0.27 acres. (other comments:)

c. Limits (boundaries) of jurisdiction based on: 1987 Delineation Manual

Elevation of established OHWM (if known):

2. Non-regulated waters/wetlands (check if applicable):³

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

³ Supporting documentation is presented in Section III.F.

- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. **Explain:** An additional 0.20 acre of wetlands was delineated within the review area but determined not to be jurisdictional. Of these, 0.07 acre is a relic of artificial wetlands that had been maintained by discharge from a water pipe on the neighboring property that has since been removed; these wetlands are not persistent without the artificial water source. Another 0.13 acre of 11 seasonal wetlands possesses wetland hydrology, hydrophytic vegetation, and hydric soils, but these wetlands are hydrologically isolated.

SECTION III: CWA ANALYSIS

A TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

Summarize rationale supporting determination that waterbody is a TNW:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is “adjacent”:

B CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 880.81 square miles

Drainage area: Pick List

Average annual rainfall: 24.0 inches

Average annual snowfall: 0 inches

(ii) Physical Characteristics:

a. Relationship with TNW:

Tributary flows directly into TNW

Tributary flows through 1 tributaries before entering TNW

Project waters are 1-2 river miles from TNW.

Project waters are 1 (or less) river miles from RPW.

Project waters are 1-2 aerial (straight) miles from TNW.

Project waters are 1 (or less) aerial (straight) miles from RPW.

Project waters cross or serve as a state boundary. **Explain:**

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

Identify flow route to TNW⁵: [The jurisdictional waters flow off-site via culvert to a wetland drainage ditch that runs along Green Island Road. The drainage ditch subsequently flows into No Name Creek, then into a tidal water called Fagan Slough, and eventually into the Napa River, a traditionally navigable water, before reaching San Pablo Bay.](#)

Tributary stream order, if known:

b. **General Tributary Characteristics (check all that apply):**

Tributary is:

- Natural: (comment if needed)
- Artificial (man-made): *Explain:*
- Manipulated (man-altered): *Explain:* [culverts and roadside ditches](#)

Tributary properties with respect to top of bank (*estimate*):

Average width: [38.5](#) feet (measured from top of bank to top of bank)

Average depth: feet. (measured from OHWM to top of bank)

Average side slopes: [Pick List](#)

Primary tributary substrate composition (*check all that apply*):

- Silt:
- Sand:
- Clay:
- Cobbles:
- Gravel:
- Muck:
- Bedrock:
- Concrete:
- Vegetation (Type / % cover):
- Other (Explain):

Tributary condition/stability [e.g., highly eroding, sloughing banks]. *Explain:* [Gradually sloped wetland drainage ditch](#).

Presence of run/riffle/pool complexes. *Explain:* .

Tributary geometry: [Meandering](#).

Tributary gradient (approximate average slope): [50](#) %

c. **FLOW INFORMATION**

Tributary provides for: [Seasonal flow](#)

Estimate average number of flow events in review area/year: [20 \(or greater\)](#)

Describe flow regime: .

Other information on duration and volume: .

Surface flow is: [overland sheetflow](#). Characteristics: .

Subsurface flow: [Unknown](#). *Explain findings:* .

- Dye (or other) test performed: .

Tributary has (check all that apply):

- Bed and banks
- OHWM⁶ (check all indicators that apply):
 - clear, natural line impressed on the bank
 - changes in the character of soil
 - destruction of terrestrial vegetation
 - vegetation matted down, bent, or absent
 - leaf litter disturbed or washed away
 - multiple observed or predicted flow events
 - water staining
 - abrupt change in plant community. *Explain:*
 - other (list):
- the presence of litter and debris
- shelving
- the presence of wrack line
- sediment sorting
- scour
- sediment deposition

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

⁶ A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

Discontinuous OHWM.⁷ *Explain:*

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (*check all that apply*):

- High Tide Line indicated by: **OR** Mean High Water Mark indicated by:
- | | |
|--|---|
| <input type="checkbox"/> oil or scum line along shore objects | <input type="checkbox"/> survey to available datum |
| <input type="checkbox"/> fine shell or debris deposits (foreshore) | <input type="checkbox"/> physical markings |
| <input type="checkbox"/> physical markings/characteristics | <input type="checkbox"/> vegetation lines/changes in vegetation types |
| <input type="checkbox"/> tidal gauges | |
| <input type="checkbox"/> other (<i>list</i>): | |

(iii) **Chemical Characteristics:**

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). *Explain:* .

Identify specific pollutants, if known:

(iv) **Biological Characteristics. Channel supports (*check all that apply*):**

- Riparian corridor. Characteristics (type, average width):
- Wetland fringe. Characteristics:
- Habitat for:
- Federally Listed species. *Explain findings:*
 - Fish/spawn areas. *Explain findings:*
 - Other environmentally-sensitive species. *Explain findings:*
 - Aquatic/wildlife diversity. *Explain findings:*

2. **Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW**

(i) **Physical Characteristics:**

(a) General Wetland Characteristics:

Properties

Wetland size: 0.27 acres

Wetland type. *Explain:* palustrine emergent wetland

Wetland quality. *Explain:* intact seasonal wetland

Project wetlands cross or serve as state boundaries. *Explain:*

(b) General Flow Relationship with Non-TNW:

Flow is: Intermittent Flow *Explain:*

Surface flow is: Overland Flow

Characteristics:

Subsurface flow: Unknown *Explain findings:*

Dye (or other) test performed:

(c) Wetland Adjacency Determination with Non-TNW:

Directly abutting

Not directly abutting

Discrete wetland hydrologic connection. *Explain:*

Ecological connection. *Explain:*

Separated by berm / barrier. *Explain:*

(d) Proximity (Relationship) to TNW

Project wetlands are 1 - 2 river miles from TNW.

Project waters are: 1 (or less) aerial (straight) miles from TNW.

Flow is from: wetland to navigable waters

Estimate approximate location of wetland as within the: 2-year or less floodplain.

(ii) **Chemical Characteristics:**

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). *Explain:*

Identify specific pollutants, if known: *Explain:*

⁷Ibid.
ud080207 HED

(iii) **Biological Characteristics. Wetland supports (check all that apply):**

- Riparian buffer. Characteristics (type, average width):
- Vegetation type/percent cover. *Explain:* 95% total vegetation cover, dominated by 40% *Lythrum hyssopifolia*, 25% *Festuca perennis*, 15% *Phalaris paradoxa*, 10% *Polypogon monspeliensis*, and 5% *Rumex crispus*.
- Habitat for:
 - Federally Listed species. *Explain findings:*
 - Fish/spawn areas. *Explain findings:*
 - Other environmentally-sensitive species. *Explain findings:* Aquatic/wildlife diversity. *Explain findings:* Wetlands provide water, supply food, and contribute nutrients needed by fish and other aquatic organisms. Other important ways in which wetlands enhance aquatic and wildlife biodiversity include the vital functions of flood storage, involving the containment and slow release of flood waters, and sediment control, as wetland vegetation binds soil particles and retards the movement of sediment in slowly flowing water. Wetlands in general support high biodiversity and provide crucial habitat for many threatened and endangered species, including many terrestrial species that depend upon wetlands to reproduce.

3. Characteristics of all wetlands adjacent to the tributary (if any)

- (i) All wetland(s) being considered in the cumulative analysis: 1
- (ii) Approximately (0.27) acres in total are being considered in the cumulative analysis.

(iii) For each wetland associated with the reach or waterbody being analyzed in this form, specify the following:

| Number/Name ⁸ | Directly abuts (Yes/No) | Size | Number/Name | Directly abuts (Yes/No) | Size |
|--------------------------|-------------------------|------------|-------------|-------------------------|-------|
| Seasonal Wetland 1 | No | 0.27 acres | | Pick | acres |
| | Pick | acres | | Pick | acres |
| | Pick | acres | | Pick | acres |
| | Pick | acres | | Pick | acres |
| | Pick | acres | | Pick | acres |
| | Pick | acres | | Pick | acres |

- (iv) Summarize overall biological, chemical and physical functions being performed: *As stated above, these wetlands likely provide water, supply food, and contribute nutrients needed by fish and other aquatic organisms. Other important ways in which wetlands enhance aquatic and wildlife biodiversity include the vital functions of flood storage, involving the containment and slow release of flood waters, and sediment control, as wetland vegetation binds soil particles and retards the movement of sediment in slowly flowing water. Wetlands in general support high biodiversity and provide crucial habitat for many threatened and endangered species, including many terrestrial species that depend upon wetlands to reproduce.*

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

⁸ In the Number/Name column, add the number and/or name that you have given the wetland being referred to in the table. Example, you are referring to a wetland on your wetland delineation map number 6, that you call wetland No.3 on a reach you refer to as Putah Creek. For this wetland you would add to the table in the Number/Name column, something like the following: (No. 3, Putah Ck., Map # 6).

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- 1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** *Explain* findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D
- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** *Explain* findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
- 3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** *Explain* findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

The 0.27-acre jurisdictional wetland and 38.5 lineal feet of other jurisdictional waters both have a significant nexus via overland flow, and likely through groundwater as well, into an off-site drainage ditch that runs along Green Island Road. The drainage ditch subsequently flows into No Name Creek, then into a tidal water called Fagan Slough, and eventually into the Napa River, a traditionally navigable water, before reaching San Pablo Bay. Though no specific studies were conducted in this tributary, or wetlands, it is likely they provide water, supply food, and contribute nutrients needed by fish and other aquatic and terrestrial organisms. Other important ways in which the drainage and wetlands enhance aquatic and wildlife biodiversity include the vital functions of flood storage, involving the containment and slow release of flood waters, and sediment control, as wetland vegetation binds soil particles and retards the movement of sediment in slowly flowing water.

D DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
- TNWs: linear feet width (ft), and/or acres.
 - Wetlands adjacent to TNWs: acres.
2. **RPWs that flow directly or indirectly into TNWs.**
- Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: .
 - Tributaries of TNW where tributaries have continuous flow “seasonally” (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: .
- Provide estimates for jurisdictional waters in the review area (*check all that apply*)
- Tributary waters: linear feet width (ft).
 - Other non-wetland waters: acres.
- Identify type(s) of waters: .
3. **Non-RPWs⁹ that flow directly or indirectly into TNWs.**
- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
- Provide estimates for jurisdictional waters within the review area (*check all that apply*):

⁹See Footnote # 3.
ud080207 HED

Tributary waters: linear feet width (ft).

Other non-wetland waters: 0.00088 acres.

Identify type(s) of waters: .

4. **Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**

Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in **Section III.D.2**, above. Provide rationale indicating that wetland is directly abutting an RPW: .

Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in **Section III.B** and rationale in **Section III.D.2**, above. Provide rationale indicating that wetland is directly abutting an RPW: .

Provide acreage estimates for jurisdictional wetlands in the review area: acres.

5. **Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**

Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at **Section III.C**.

Provide acreage estimates for jurisdictional wetlands in the review area: 0.27 acres.

6. **Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at **Section III.C**.

Provide estimates for jurisdictional wetlands in the review area: acres.

7. **Impoundments of jurisdictional waters.¹⁰**

As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.

Demonstrate that impoundment was created from "waters of the U.S.," or

Demonstrate that water meets the criteria for one of the categories presented above (1-6), or

Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):¹¹

which are or could be used by interstate or foreign travelers for recreational or other purposes.

from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.

which are or could be used for industrial purposes by industries in interstate commerce.

Interstate isolated waters. Explain: .

Other factors. Explain: .

Identify water body and summarize rationale supporting determination: .

Provide estimates for jurisdictional waters in the review area (*check all that apply*)

Tributary waters: linear feet width (ft).

Other non-wetland waters: acres.

Identify type(s) of waters: .

¹⁰ To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

¹¹ Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

Wetlands: acres.

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
 - Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. *Explain:*
- Other: (explain, if not covered above): **Artificially-created wetlands had been maintained by a former drainage pipe on the neighboring property.**

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (**check all that apply**):

- Non-wetland waters (i.e., rivers, streams): linear feet width (ft).
- Lakes/ponds: acres.
- Other non-wetland waters: acres. List type of aquatic resource: .
- Wetlands: **0.20** acres.
-

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: **location map, soil type map, and draft wetland map.**
- Data sheets prepared/submitted by or on behalf of the applicant/consultant.
 - Office concurs with data sheets/delineation report. **prepared by consultant on May 5, 2015**
 - Office does not concur with data sheets/delineation report.
- Data sheets prepared by the Corps: **prepared during site visit on July 8, 2015.**
- Corps navigable waters' study: .
- U.S. Geological Survey Hydrologic Atlas: .
 - USGS NHD data.
 - USGS 8 and 12 digit HUC maps.
- U.S. Geological Survey map(s). Cite scale & quad name: .
- USDA Natural Resources Conservation Service Soil Survey. Citation: .
- National wetlands inventory map(s). Cite name: .
- State/Local wetland inventory map(s): .
- FEMA/FIRM maps: .
- 100-year Floodplain Elevation is: (National Geodetic Vertical Datum of 1929)
- Photographs:
 - Aerial (Name & Date): **ArcGIS and Google Earth Pro aerial imagery.**
 - Other (Name & Date): **site photographs submitted by consultant.**
- Previous determination(s). File no. and date of response letter: **2007-400829N, previous JD dated June 3, 2008 but never mailed because of applicant withdrawal.**
- Applicable/supporting case law: .
- Applicable/supporting scientific literature: .
- Other information (please specify): .
-

B. ADDITIONAL COMMENTS TO SUPPORT JD:

- Limits of Delineation
- Seasonal Wetland (Subject to Corps Jurisdiction) (0.27 acre, 11,767 sq ft)
- Isolated Wetlands (Not Subject to Corps Jurisdiction) (0.13 acre, 5,720 sq ft)
- Artificially Created Features (Not Subject to Corps Jurisdiction) (0.07 acre, 2,973 sq ft)
- Other Waters (Subject to Corps Jurisdiction) (0.00088 acre, 38.5 in ft)
- Storm Drain Inlet
- 8 Inch Culvert
- Data Points
