

# Body of Water

Sat  
June 29  
2pm–4pm

Join Michael Stocker, Executive Director of Ocean Conservation Research, in a discussion about the health of our oceans. OCR focuses on an array of projects that endeavor to advance our understanding about how animals perceive and use sound in order to assess the effects of ocean noise pollution on their survival. OCR uses that understanding to inform the public, policymakers, and stakeholders on issues of ocean noise pollution so that we may all become better stewards of the sea.
